

Step 1: Open Windows Powershell

1. Press the Win + R keys together on your keyboard to open the Run dialog box.
2. Type powershell and hit Enter.

Step 2: Navigate to the Project Directory

1. In the PowerShell window, type the following command to change the directory to the folder containing your project documents:
Replace [Directory path of project folder] with the actual path to your project folder.

```
powershell  
  
cd [Directory path of project folder]
```

2. Press Enter to execute the command.

Step 3: Install Required Libraries

1. Ensure you have Python and pip installed on your system.
2. In the PowerShell window, type the following command to install all the required libraries listed in the requirements.txt file:
3. Press Enter to execute the command.

```
powershell  
  
pip install -r requirements.txt
```

4. Wait for the installation to complete. This may take some time depending on the number and size of the libraries.

Step 4: Run the Application

1. Once the installation of the required libraries is complete, type the following command to run your application:

```
powershell
```

```
python app.py
```

2. Press Enter to execute the command.

Step 5: Access the Application in a Web Browser

1. Open your preferred web browser.
2. In the address bar, type 127.0.0.1 and press Enter.
